F.A.O Mr D Wyatt – Sales Director

Dear Dave,

With regards to your enquiry as to our opinion of the LED lights that you supplied us, the basic energy savings are very good in comparison with the old lighting. However another very good cost saving with these lights is that in one cold store we exchanged them for the original lighting was producing the heat equivalent to 10 x 1 bar electric fire, the LED lights are producing virtually no heat. In the past we were paying for electricity to produce this heat as a by product of lighting and then paying for energy again to run the refrigeration plant to extract this heat from the chamber. This scenario would even bring a smile to the face of Ebenezer Scrooge.

Yours Sincerely

26.09.2012
Lew Peppercorn
